

# PANEL RADIATORS

## STEEL PANEL RADIATORS

A classic combination of elegant design and efficient performance.

*The radiator panels offered by H<sub>2</sub>O Heating are of the highest quality from Europe's foremost manufacturers; with an exceptional choice of heights, widths and convector options available our panel radiators provide sizing flexibility and superb quality all combined with guaranteed performance to cover a multitude of application requirements; all our radiators come with a 25 year manufacturer's guarantee: Now that's peace of mind!*

# PANEL RADIATORS

The standard radiator panels are manufactured in rolled steel powder coated in a high gloss white providing a premium finish that's resistant to corrosion and scratches with matching top grille and side panels providing a stylish finish – however, if white is not compatible with your room décor H2O Heating can offer the option of colour matching radiator panels.

As part of the service offered by H2O Heating we will accurately calculate the heat requirements for each individual room taking into account the room dimensions, external walls and window area to ensure the desired temperature is reached. A radiator panel (or panels) will then be selected ensuring the heat requirement is provided whilst at the same time considering the room's aesthetics.

## EFFICIENT HEAT

With efficiency being of the utmost importance all steel radiator panels offered by H2O Heating are convector panels, this means that they provide both radiated heat, emitted directly from the panel, and convected heat, which is produced by way of fins mounted to the rear of the panel. Convected heat is circulated naturally by the cooler air being drawn up through the radiator and passed over the fins, heated, and then emitted from the top into the room; this process increases the performance and efficiency of the panel resulting in the need for a smaller physical panel whilst producing a greater heat output.

This combination of radiated and convected heat provides a natural comforting heat to you and your furnishings as well as a greater efficiency.

## SIZING OPTIONS

Steel radiator panels come in a wide range of heights from 300-900mm and a range of widths from 400-3000mm in either single, double or triple convector depths as well as the new compact convector depth. By increasing the convector depth of a panel it allows the use of a physically smaller panel to obtain the same heat requirement; ideal if space is limited.

Single convector

Compact convector

Double Convector

Triple Convector

## A STYLISH ALTERNATIVE

Whilst the steel panel radiator provides a classic timeless design, if you are looking for something a little more unique, a radiator that allows for style and creativity as well as outstanding performance consider one of our other innovative range of radiators; your heating system can be as creative as your imagination.
