

CAST IRON RADIATORS

CAST IRON COLUMN RADIATORS

Combining timeless elegance and style with maximum performance.

THE CAST IRON COLUMN is a replica of a traditional radiator – emulating the style of a bygone era and is ideally suited to period interiors. Manufactured from cast iron, the cast iron column provides character and elegance while still producing the efficient heat required of a modern hydronic heating system.

Finished in a standard primer, cast iron columns can be custom painted to complement your interior. With guarantees of up to 20 years, you can be confident of selecting a quality product.

THE DECORATIVE CAST IRON COLUMN radiator offers true opulence – finished in natural cast iron, the stunning scroll relief pattern provides a feeling of style and glamour to the traditional interior.

By their very nature cast iron radiators are less responsive to changes in temperature – they take longer to heat up than a comparable tubular steel column radiator, but will hold their heat for longer.

TUBULAR STEEL COLUMN RADIATORS

TUBULAR STEEL COLUMN RADIATORS

Combining timeless elegance and style with maximum performance.

THE TUBULAR STEEL COLUMN – equally at home in the modern or traditional environment – is a modern twist on a traditional design, combining looks with warmth in one superior product.

Manufactured in steel in a wide variety of heights (15 heights from 207mm up to 2500mm), column options (2, 3, 4, 5 and 6) and widths (sections), this is a truly flexible radiator with the ability to create a radiator that will suit your individual requirements exactly; over 500,000 options can be achieved!

There are three mounting options available; welded feet, cast feet or wall brackets. Finished in white as standard, they can be custom powder coated to a colour unique to your interior, creating a true focal point – one that is as stylish as it is functional.
