

IMMERGAS INTEC

HYDRONIC HEATING BOILERS
The heart of any heating system

A brand leader in Europe, Immergas is an Italian company at the forefront of the hydronic heating market with a presence in over 30 countries, and now offers a range tailor made to the Australian market.

An integral part of the Immergas philosophy is innovation and with a Research and Development Centre continually committed to the continuous growth and development of its products, you can be assured of the highest standards in both quality and technology; the Immergas Intec boiler now offers efficiency ratings of over 96.6%, optimising energy savings.

Being an Italian made product not only are Immergas boilers of a high quality and reliability, great emphasis is placed on the aesthetics too. Minimalist in design, they complement any home interior or combined with a specially designed case can be installed externally and out of sight.

Regardless of the Immergas product chosen you can be confident that they all have one thing in common; innovative technology, reliability and durability.

- 10 Years Manufacturers Heat exchanger warranty

IMMERGAS INTEC 30KW COMBI BOILER

Immergas also offer a combination version of the highly successful Intec system boiler. Combination boilers are Europe's best selling type of boiler as not only do they heat the hydronic heating system they provide all the properties hot water requirements from one product - no need for a separate instantaneous hot water unit. The hot water is delivered at mains pressure and the combination boiler will only heat the water when there is a demand. However, combination boilers are only recommended for properties with 2 bathrooms this is because the water flow is reduced when more than one tap/shower is operational.

The Intec combination boiler is available in a 30kw option only and again can be installed internally or externally it contains all the same great features and benefits of the Immergas Intec range*.

*The Premier Pack 5 year upgrade is not available on the Intec Combination boiler.
